

# Workshop on Digital Image Processing and Applications

## 4th June-9th June 2018

Many of the real-world problems involve image or video as input. To solve such real-world problems image processing algorithms need to be designed. This workshop will focus on fundamentals of Digital Image Processing (Theory and Practice). Each topic will have both theory and practice session. The practice session will be handled in MATLAB. The target participants for this workshop include faculty and research scholars working in the area of image processing, and also UG/PG students doing the project in this area.
